

**ENVIRONMENTAL
ACCOUNTING
PLATFORM**

A definitive carbon calculation engine for Australian agriculture, fisheries and forestry.

The first of its kind, the AIA Environmental Accounting Platform (AIA EAP) enables the calculation of a carbon footprint at a commodity, enterprise and whole of business level.

It is a pre-competitive solution, which provides Australian producers and their supply chains with an accessible and standardised approach to carbon accounting across multiple commodities.

The AIA EAP utilises carbon calculators that are 100% consistent with the most widely used and current de-facto standard, the University of Melbourne's Greenhouse Accounting Framework (GAF) Tools.

Science-based

An expert Technical Advisory Panel ensures that calculation models align with the latest science and are consistent with relevant Australian standards and protocols

Backed by industry

Built with investment from nine of Australia's rural Research and Development Corporations

Whole-of-enterprise reporting

Seamlessly combines multiple commodities to enable entering of data once to achieve a whole-of-enterprise carbon footprint

ACCOUNTING
PLATFORM**

AGRICULTURAL INNOVATION AUSTRALIA®

ENVIRONMENTAL ACCOUNTING PLATFORM

A definitive engine for everyone

Producers

Producers can use the AIA EAP to understand their carbon footprint across multiple commodities. They can also use scenario planning to assist with decision-making around reducing emissions and capturing new opportunities.

Access is via channels producers already use and trust, including their rural Research and Development Corporations or their existing software and service providers.

Supply chain

The AIA EAP does not compete with other calculators. It is an engine that can be used by carbon calculation providers, enabling them to offer their customers a common and consistent carbon footprint, that reflects the latest science and research.

Farm and management solution providers, supply chain participants, agribusiness, financial institutions and others can integrate with the AIA EAP engine and build it into their own service offerings.

Backed by science and industry

A panel of leading Australian experts in greenhouse gas (GHG) accounting, emissions reduction, soil carbon management and climate science, ensures the AIA EAP is up to date and is consistent with relevant Australian standards, research and protocols.

The AIA EAP was built by AIA with investment from several of Australia's rural Research and Development Corporations (RDCs), including:

- Australian Pork Limited
- Grains Research and Development Corporation
- Meat & Livestock Australia
- Australian Eggs
- AgriFutures Australia
- Cotton Research and Development Corporation
- Fisheries Research and Development Corporation
- Australian Meat Processor Corporation
- Sugar Research Australia.

Agricultural Innovation Australia Ltd (AIA)

AIA is the company behind the AIA EAP.

AIA was established by Australia's 15 rural Research and Development Corporations, which span the agriculture, fisheries and forestry industries.

As a not-for-profit company, AIA is ideally placed to own and manage the IP, infrastructure and governance of an environmental accounting platform on behalf of industry.

Its mandate enables it to look across commodities and facilitate investment and collaboration in solving big, cross-sectoral challenges.
